PRESS RELEASE

Lerch Bates Limited commissioned to design lifts and façade access system for new Gazprom Headquarters

Lerch Bates Limited is commissioned to design the lifts and façade access system for the new Gazprom headquarters building. The project, located in St Petersburg, Russia is a 396 metre twisting glass needle designed to reflect the spires in this historic Russian City. Gazprom, the Russian energy giant, is the fifth largest corporation in the world. Preliminary design work on the lift system includes low and mid rise banks in the lower part of the building; double deck shuttle lifts serving a sky lobby and two additional local zones of single deck lifts. This prestigious award reflects the strong relationship between Lerch Bates Limited and RMJM Architects of London. This is the second project in Russia these two firms have collaborated on; the first being the Moscow Wedding Palace.
